

# CLEANING & MAINTENANCE INSTRUCTIONS

## FOR FLOOR COVERINGS BY TATE GLOBAL GMBH

These instructions describe the recommended care for floor coverings and apply to both elastic and textile coverings. The specified measures are based on practical experience and aim to support optimal usage.

### 1. Routine Cleaning

#### 1.1 Elastic Coverings

Regular cleaning of elastic floor coverings is essential for long-term use. The following steps have proven effective:

Remove coarse dirt: Sweep or vacuum using an appropriate industrial vacuum cleaner.

Damp cleaning: Use a slightly damp cleaning cloth or a well-wrung mop with a suitable cleaning agent.

Alternatively, clean with mist-dampened disposable or gauze cloths. Periodically, use a compact cleaning machine.

#### 1.2 Textile Coverings

For textile floor coverings, daily maintenance is essential to effectively remove dirt:

Daily vacuuming: Brush vacuuming helps to loosen and remove dirt from the pile.

Spot removal: Stains should be treated immediately with warm water or a mild cleaning agent.

### 2. Deep Cleaning

#### 2.1 Elastic Coverings

If regular cleaning is no longer sufficient, deep cleaning is necessary:

1. Remove coarse dirt: Sweep or vacuum loose dirt.
2. Apply cleaning solution: Use a basic cleaner.
3. Scrub: Use a single-disc machine with an appropriate cleaning pad.
4. Wipe down: Remove cleaning agent residues with clear water and a well-wrung mop.

#### 2.2 Textile Coverings

Deep cleaning of textile coverings should be carried out periodically:

1. Preparation: Clean the area with a dual-brush vacuum cleaner.
2. Shampooing: Use a three-disc machine with natural bristles.
3. Final step: Remove the dried foam with a vacuum cleaner.

### 3. Special Precautions

Ventilation and installation panels: Take extra care during cleaning.

Disinfection requirements: In areas like hospitals, use suitable disinfectants.

The provided information is based on practical experience.
